ENTITY DINING CHAIR

Sculptural restraint at the table

The Entity Dining Chair refines the collection’s architectural vocabulary for use at the dining table. Its woven metal mesh panel is integrated into the backrest, creating a moment of texture framed by softly curved forms.

The chair’s proportions are clean and contemporary, allowing it to complement both sculptural dining tables and restrained interiors. It offers comfort without excess, presence without heaviness.

ENTITY COUNTER STOOL

A lower expression of the same sculptural language

The Entity Counter Stool carries the same design language as the bar stool in a more compact height. The woven metal mesh remains inset into the back opening and extends downward along the rear leg, preserving the continuity of texture and form. With its curved seat and softened profile, the stool maintains the balance between structure and ease—ideal for kitchen counters and casual gathering spaces.

ENTITY BAR STOOL

Texture and architecture in vertical form

The Entity Bar Stool is defined by its sculptural use of woven metal mesh. Set into an opening in the backrest, the mesh becomes the stool’s artistic focal point, continuing downward along the rear leg in a seamless vertical gesture. The curved seat and base soften the architectural framework, allowing the metal mesh to introduce texture without rigidity. Though crafted from strong materials, the form remains fluid and inviting. Architectural yet tactile, the Entity Bar Stool brings material richness and quiet drama to elevated seating.
